

Cold Water Immersion Guidelines

Cold Water Immersion Tub

When treating a potential Exertional Heat Stroke (EHS), schools shall be properly *prepared and equipped* to initiate Cold Water Immersion (CWI) or other best practice cooling technique. Cooling techniques must be implemented immediately, and EMS should be contacted concurrently. This must be followed during all NSAA sanctioned events when the temperature is at the WBGT is a Yellow flag alert level or higher.

WBGT READING Flag	COLD WATER IMMERSION TUB GUIDELINES
Green	Green: Access to alternative cooling measures (cooler with ice, water, and towels, or tarp) are readily available at the practice and competition sites.
Yellow	Yellow through Black: A cold-water immersion tub of approximately 150 gallons shall be partially filled with water or a tarp (taco/burrito method) for cooling is accessible within 5-10 minutes of the practice/competition site. Ice shall also be readily available. Remove necessary external clothing/equipment prior to cooling. Aggressively stir water during cooling process.

TREATMENT OF EXERTIONAL HEAT STROKE

If an athletic trainer/medical provider is onsite, utilize the principle of ***Cool First, Transport Second***. When cooling, use CWI or other best practice cooling method, until a core temperature at or below 102F is reached.

If the athletic trainer/medical provider is not present or not onsite and EHS is suspected, cool immediately for a minimum of 20 minutes based upon the average estimated cooling rate of 1 degree per 3 minutes. Continue cooling until either an athletic trainer or other appropriate medical providers, EMS assumes control of the EHS patient and determines if additional cooling is needed based on core temperature.

Taco/Burrito Method

Tarp Assisted Cooling Oscillation (TACO) is a method in which a combination of ice and cold water are added to an athlete once they have been placed on a tarp with the edges held up by clinicians to create a physical “taco” for the patient to be encased inside.
